Research Article Writing

Date : 22/4/2019

Time : 11am

Venue : 102, AIGS Block

About Acharya

Acharya Institutes is an educational organization consisting of 11 institutes that offer specializations in various fields and foster interdisciplinary courses. Acharya Institutes is a sprawling 120

acre campus, with Bengaluru's largest Wi-Fi-enabled composite academic facility. Acharya Institutes has 15 research centers, 50 academic streams with over 100 programs. 15000 students from 75 nationalities are presently pursuing their education at Acharya Institutes.

About AIGS

Acharya Institute of Graduate Studies (AIGS) was founded in 2005, and is counted among the top graduate colleges in Bengaluru. The Institute offers Undergraduate and Postgraduate courses in a variety of subjects that include Language, Social Work, Social Sciences, Sciences, Commerce, Management, Marketing, Accounting, Fashion and Apparel Design, etc. AIGS is endowed with modern physical, technological and academic infrastructure and provides a world-class learning ambience to its students. AIGS is committed to mentoring its students beyond the prescribed curriculum aspects.

About the Department

The Psychology Department aims at providing a solid theoretical foundation in conjunction with practical as well as field experience across a variety of specializations. It is designed to enhance the knowledge and skill base of students in order to thoroughly equip them to meet growing mental health needs in today's world. It aims at training students to apply their knowledge in various settings including hospitals, schools, colleges and organizations. It aims to strive towards enhancement of the entrepreneurial skills of students and imbue them with managerial strategies for a smooth manoeuvre and flourish in the face of any crisis.

SCIENTIFIC RESEARCH ARTICLE WRITING

The workshop on "Scientific Research Article Writing" was organized by the Department of Psychology on 22 April 2019. The workshop was facilitated by Dr. Santhosh, Assistant Professor, at Christ University, Bengaluru. The objectives of the workshop were to enable the participants, to define the research problem, develop an approach to the research problem and select of suitable research design, impart capabilities for formulation and testing of hypothesis based on the nature of research, to enable the participants to understand report writing and writing research proposals and to make aware the participants about latest trends in discipline-specific research.

A research paper is a piece of academic writing that provides analysis, interpretation, and argument based on in-depth independent research. Research papers are similar to academic essays, but they are usually longer and more detailed assignments, designed to assess not only your writing skills but also your skills in scholarly research. Writing a research paper requires you to demonstrate a strong knowledge of your topic, engage with a variety of sources, and make an original contribution to the debate.

A research paper is a culmination and final product of an involved process of research, critical thinking, source evaluation, organization, and composition. It is, perhaps, helpful to think of the research paper as a living thing, which grows and changes as the student explores, interprets, and evaluates sources related to a specific topic. Primary and secondary sources are the heart of a research paper, and provide its nourishment; without the support of and interaction with these sources, the research paper would morph into a different genre of writing (e.g., an encyclopedic article). The research paper serves not only to further the field in which it is written but also to provide the student with an exceptional opportunity to increase her knowledge in that field. It is also possible to identify a research paper by what it is not.

Sanidya
PRINCIPAL
Acharya Institute of Graduate Studies
Soldevanahalli, Bengaluru-560107

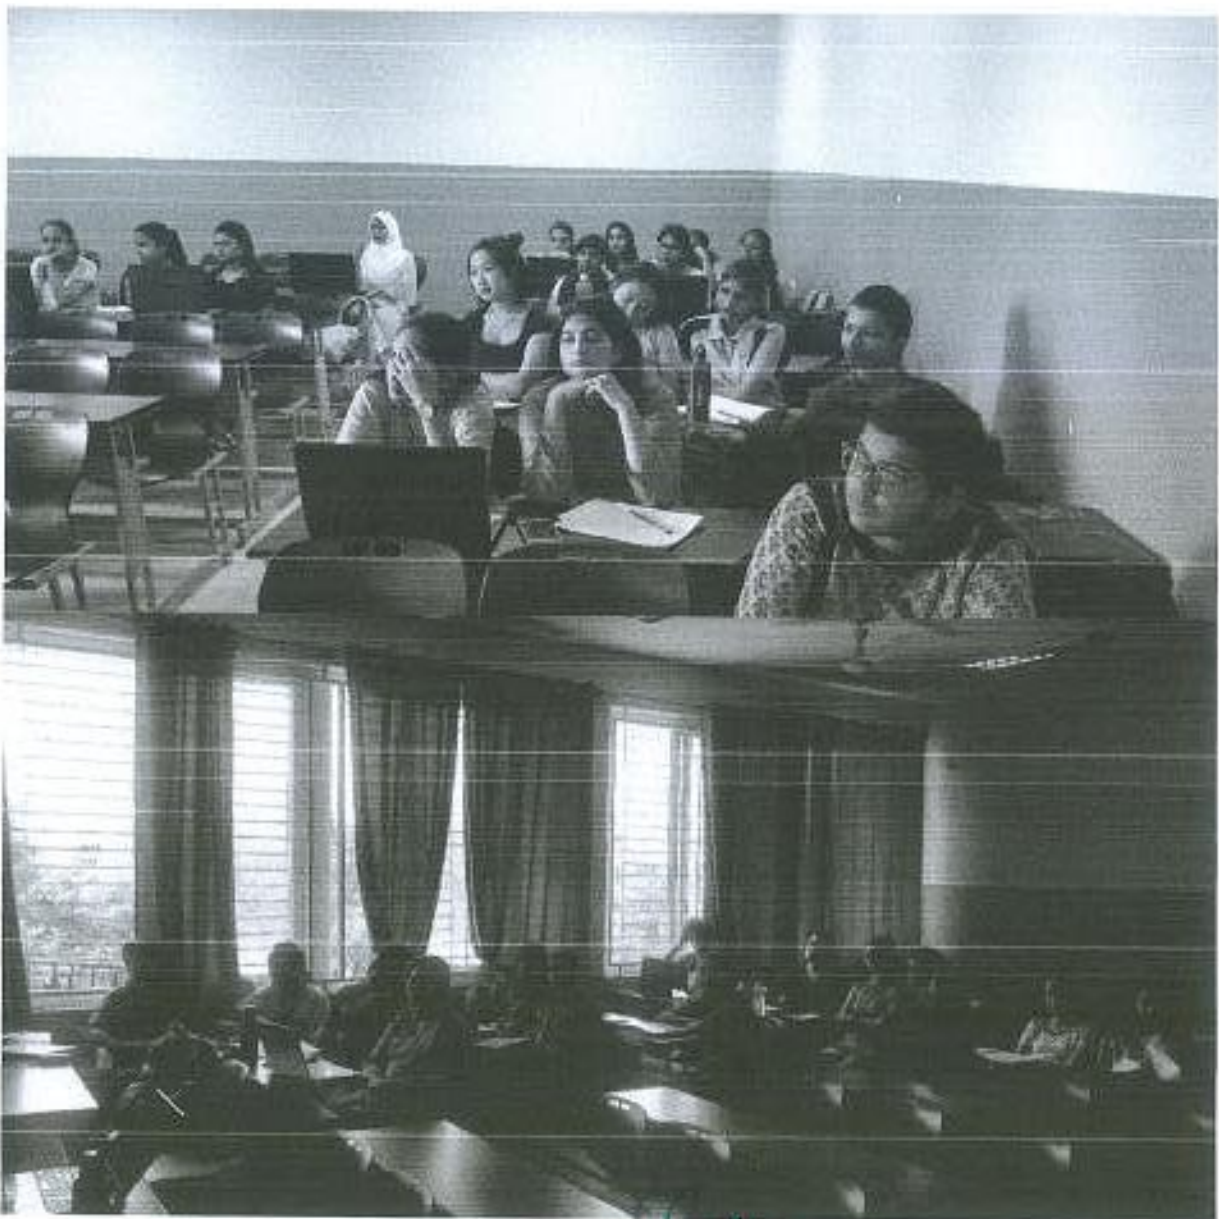

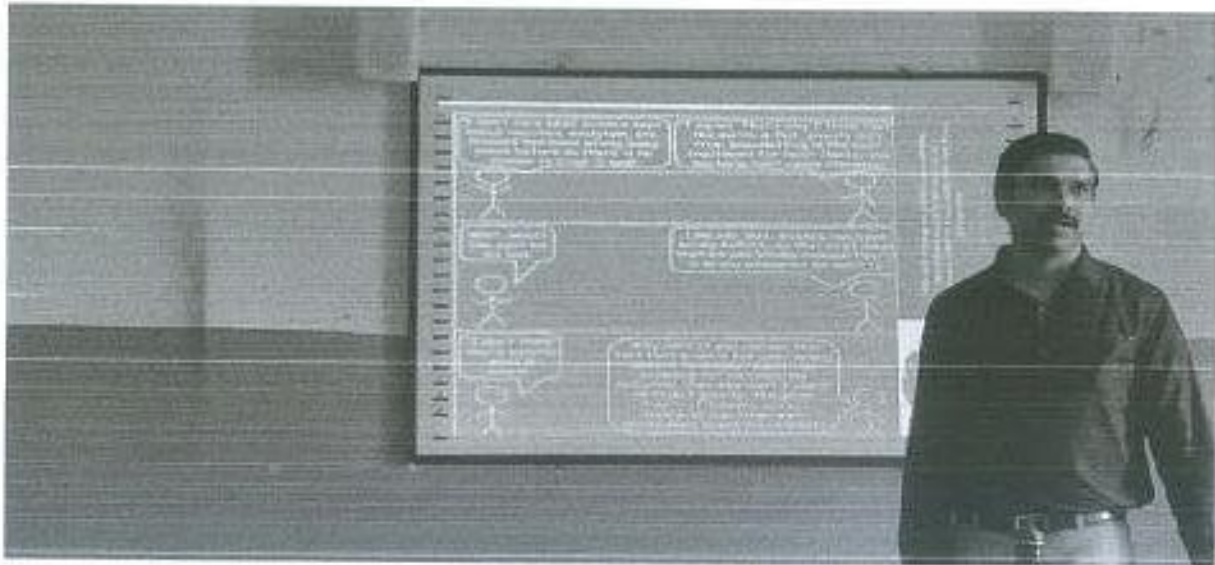

A research paper is not simply an informed summary of a topic by means of primary and secondary sources. It is neither a book report nor an opinion piece nor an expository essay consisting solely of one's interpretation of a text nor an overview of a particular topic. Instead, it is a genre that requires one to spend time investigating and evaluating sources with the intent to offer interpretations of the texts and not unconscious regurgitations of those sources. The goal of a research paper is not to inform the reader what others have to say about a topic, but to draw on what others have to say about a topic and engage the sources in order to thoughtfully offer a unique perspective on the issue at hand. This is accomplished through two major types of research papers.

Dr. Santhosh started the session with introducing the concept and importance of research article writing, he started explaining the differences between the opinions and arguments of a concept or a topic, clarity to which helps to form the title of research article. He provided a detailed explanation of procedure of writing a research article. He explained how the flow of an article writing should be in terms of developing an introduction, Placing the arguments with theoretical support, concluding with a rationale, he helped us to form research title for paper and briefly explained the methodology, process and procedure for the publication of research paper.

Resource person also provided valuable feedback on-spot research study topics selected by students and helped them to accurately and appropriately apply the methods learned during workshop. The session focused on APA referencing and explained how to write the article in APA format of referencing. He also personally interacted with each designated group and provided his insight to presentation done by students.

The outcomes of the workshop were that the participants learned to effectively communicate their ideas and how to analyze and critique the work of others, gained hands-on experience in their field, gained a deeper understanding of the scientific process, develop research questions and form and test their hypotheses.

Understanding Depression

A student presentation on "Understanding Depression" was conducted as a Psychology Club activity on 23 August 2018, by the Department of Psychology for the faculty and students of BA of AIGS. The objective of this presentation was to raise awareness about mental health, reduce the stigma associated with mental illness, and promote help-seeking behaviour and emotional well-being practices.

Depression (major depressive disorder) is a common and serious medical illness that negatively affects how you feel, the way you think and how you act. Fortunately, it is also treatable. Depression causes feelings of sadness and/or a loss of interest in activities you once enjoyed. It can lead to a variety of emotional and physical problems and can decrease your ability to function at work and at home.

Depression affects an estimated one in 15 adults in any given year. And one in six people will experience depression at some time in their life. Depression can occur at any time, but on average, first appears during the late teens to mid-20s. Women are more likely than men to experience depression. Some studies show that one-third of women will experience a major depressive episode in their lifetime. There is a high degree of heritability (approximately 40%) when first-degree relatives (parents/children/siblings) have depression.

The death of a loved one, the loss of a job or the ending of a relationship are difficult experiences for a person to endure. It is normal for feelings of sadness or grief to develop in response to such situations. Those experiencing loss often might describe themselves as being "depressed."

But being sad is not the same as having depression. The grieving process is natural and unique to each individual and shares some of the same features of depression. Both grief and depression may involve intense sadness and withdrawal from usual activities.

Grief and depression can co-exist For some people, the death of a loved one, losing a job or being a victim of a physical assault or a major disaster can lead to depression. When grief and depression co-occur, the grief is more severe and lasts longer than grief without depression. Distinguishing

Principals
PRINCIPAL
Acharya Institute of Graduate Studies
Soladevanahalli, Bengaluru-560107

between grief and depression is important and can assist people in getting the help, support or treatment they need.

The event began with a song dedicated to those who fight depression and has found a means to express their struggle in a creative way, sung by students, Misllett and Chandana, followed by a presentation by another student, Veerendra.

The presentation included information that educated students about the various myths and misconceptions about depression followed by an interactive session of questions and clarifications between the students and the presenter. Mrs. Prathibha M. V., Assistant Professor of Psychology also explained how depression must be differentiated from sadness and it had criteria to fall under the category of a disorder as per classifications of mental illnesses. The event concluded with a presentation of a few renowned personalities who gave into depression and who fought depression, and also how seeking help was essential as students were now aware of the signs of identifying depression.

The outcomes of the presentation were that the students learned about therapy and how to treat the problem of depression. The students became freer to talk about it and acknowledge that they have a problem. The students are able to speak openly about mental health, can reduce misconceptions and stigma, and can encourage those who are suffering to seek help and find a support network. It is important for caregivers, friends, and loved ones to understand the impact that mental health has on daily life.

CERTIFICATE PROGRAMME

The Department of Commerce (PG) conducted a four-day certificate program entitled "Advanced Excel and SQL for Financial Analysis" for first-year MFA and MIB students from 31 May 2019 to 04 June 2019. The session was conducted by Mr Omkar Raikar, Entrepreneur, Business Toys, Bengaluru. The objective of the event was to provide the participants with the opportunity to learn how to do basic SQL queries and set up a sample database.

SQL is useful for managing huge stores of structured data. Those who work with this language to perform queries are an asset to their organization because they understand how their company structures its data and therefore can retrieve actionable information relatively quickly. SQL, or Structured Query Language, allows users to access and manipulate databases. It is also able to retrieve data from a database, execute queries against a database, and create content in existing databases, such as tables, records, or views.

SQL is one of the most popular programming languages in existence. It is used in a variety of professions, such as Business Analytics, Data Science, Software engineering, Database administration and Journalism.

Databases play an integral role in business operations across all fields. SQL, which helps users communicate with these databases, is used by many organizations, such as Netflix, Uber, Amazon, Wells Fargo, and Google. It is considered one of the most user-friendly and robust programming languages. Because of how prevalent SQL is across professional sectors, knowledge of SQL can lead to many job opportunities and upward career mobility.

SQL is a standard language used to communicate with relational databases. Organizations across industries rely on SQL to access and work with the data contained in their databases. Important business information about products, customers, or orders is just some data an organization may store in a database. Among its many uses, SQL has applications for

searching, updating, and maintaining databases. It can also insert or delete records from databases and change the database's actual structure by creating or deleting tables and objects.

SQL operates on local intranet or internet systems and can be used on laptops, PCs, servers, and some mobile devices. Even though SQL is considered to be a relatively simple programming language, it is a powerful tool for helping users retrieve the specific information they need within a large database. Those working with SQL do not need coding skills and can instead use basic keywords such as "update" or "select" to perform data queries.

During the session of four days, he covered the application of Excel and SQL in the business. The session was very interactive and the students benefitted. By the end of the programme, students gave very good oral feedback about the programme and expect more certificate programmes like this to learn the practical application of software in the business. All student participants were issued certificates on the final day of the programme. As the outcome of the event, the participants will be able to retrieve data from Oracle Database, restrict data from Oracle Database, sort data from Oracle Database, and identify statements meant.
